

# ECO FORMULA™

Hydroxypropyl-Chitosan (HPCH) 1.0%

## PROPERTIES

ECO FORMULA is specifically designed to enhance nail growth to improve the appearance of dystrophic nails. Symptoms associated with fungal nails will require an anti-fungal product to eliminate the infection.

## Hydro-Lacquer Technology

Hydro-Lacquer technology forms an invisible film that protects the nail plate and maintains the correct degree of hydration to promote the growth of a healthier nail. ECO FORMULA can easily be removed with water, eliminating the use of organic solvents, making it nail friendly.

## INSTRUCTION FOR USE

ECO FORMULA should be applied daily to clean, dry nails. Using the supplied nail brush, paint on a thin layer of the product directly on the nail plate. ECO FORMULA dries quickly, leaving an invisible and odorless film that protects the nail. The protective film is hydrosoluble, therefore ECO FORMULA should be applied after nail washing and drying, preferably before bedtime. ECO FORMULA can be used to improve the appearance of nails damaged by trauma or onychomycosis, a common fungal nail disorder. ECO FORMULA should be applied until the nail has grown a new and healthy plate.

ECO FORMULA may also be used under a cosmetic colored nail polish, thus protecting the nails from damaging solvents used for polish removal.

The product should not be applied to wounds.

## COMPOSITION

Alcohol denat, hydroxypropyl-chitosan (HPCH) 1.0%, water.

## WARNINGS

- For external use, do not use on wounds
- Do not ingest
- Flammable
- Close the bottle immediately after use
- Do not use if you are allergic or hypersensitive to any of the components of ECO FORMULA
- Keep out of the reach of children

## GENERAL INFORMATION FOR USERS

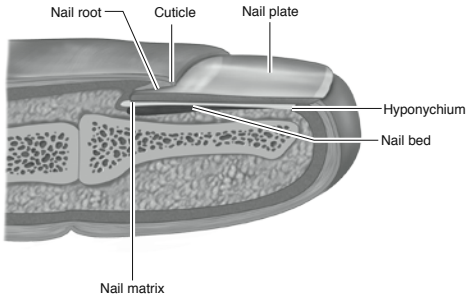

### How is the nail built?

Our nails are hard keratin plates, made of a thick 0.5-0.7 mm layer of keratinized cells. The cells are regenerated by the nail matrix, slowly pushing forward the nail plate (0.5-1.2 mm per week) in the distal direction. The nail plate protects the nail bed, which contains numerous blood-vessels and nerves.

### Nail alterations

Healthy nails are smooth, strong, elastic, without spots or pits and show a white lunula.

## FURTHER SUGGESTIONS FOR NAIL CARE

Many people suffer from nail disorders like fragile and splitting nails. These alterations can be caused by:

- Skin diseases (fungal infections, psoriasis and eczema)
- Unbalanced diet
- Metabolism disorders
- Continuous use of water and/or chemical agents (detergents, nail lacquer solvents)
- Trauma of the nail plate, nail skin, improper manicure, tight or inadequate footwear

The exact reasons of nail disorders should be established by your doctor. Nail alterations are evident on the nail plate:

- Ridges and grooves appearing on the nail can become fragile and split

- To avoid splitting, keep nails short and filed evenly
- Do not file the nails immediately after bath or shower as they could split
- Always file the nails in the same direction from the external to the internal side; avoid back and forth filing
- After washing, dry your fingernails and toenails carefully to avoid tearing or worsening the nail condition
- Use gloves while in contact with water or chemical substances to prevent the accidental removal of ECO FORMULA.
- As nail lacquer solvents can damage the nails, you should not use harsh polishes frequently

## HOW SUPPLIED

ECO FORMULA 12 mL bottle  
NDC 68712-035-01

Manufactured for:
